

Automating and Managing Business Licensing for Municipalities

The TBS Occupational Tax System (OTS) helps government automate and manage business licensing, registration, and renewal processing, accelerating the capability to produce and collect revenue more efficiently.

Flexibility

The business licensing and registration program of each municipality and county has special needs associated with their unique regulations, taxation requirements, and internal procedures. TBS OTS provides a flexible solution for managing and processing these particular requirements, providing an unlimited number of occupational license and registration types, including general, multiple and segmented business categories. The system also allows you to easily create new case types and business rules to reflect the specific regulations of your jurisdiction.

Improving Customer Service

Your Citizens expect timely customer service when they are trying to obtain the license or registration they need to operate their business. By automating many of the tasks associated with issuing a license, department evaluations, sign-offs, approvals, payments and notices, TBS OTS streamlines and simplifies the process. The resulting value for municipalities is their ability to provide more efficient and accurate service to their constituents.

Features

- Printing of Occupational Tax forms and letters, either by batch or on demand.
- Ability to use SIC Codes to identify license types.
- Standardized screen layouts following IBM's SAA
- Multiple licenses and payments per business
- Posting of payments
