

# Biometric Employee Time and Attendance Tracking

TBS uses TimeClock Plus™ biometric technology to eliminate the age old problem of clock-in/out security for employees. By using Biometric recording devices the need to keep up with employee identification cards and/or badges is also eliminated.

Biometric verification equates to the digital imaging of a particular human feature such as the fingerprint or hand, and then storing a value for that image which is then used in authenticating that employee during future clock transactions.

Biometrics offer confirmation of the identity of each employee performing clock transactions. Employees are enrolled when originally added as an employee in TimeClock Plus by having their biometric image taken. Each subsequent use of TimeClock Plus will require that the image taken during each transaction matches the original stored image in order to complete the transaction.

Bio RDT 100/200 Series

Biometrically controlled employee access for the break-room, office, garage, or warehouse

BioScan II Desktop  
USB or Parallel

Desktop biometric control for the office environment

Real-Time  
Tracking  
Operation

HandPunch 100

Used in conjunction with RDT 100/200 series, the HandPunch 100 provides the utmost in reliability and security when clocking in or out from more harsh environments.
