

GoIDEA™

FROM INTERVENTION TO REIMBURSEMENT AND
EVERYTHING IN-BETWEEN.

SPECIAL EDUCATION MANAGEMENT SYSTEM - GoIDEA

GoIDEA is a web-based Special Education data management system. With this system, school administrators and teachers can maintain the information needed for current, referred, and historical Special Education students. Easily enter and maintain IEPs, Progress Reports, Special Ed forms, and all other necessary data for your Special Education students.

SECTION 504 MANAGEMENT SYSTEM (504)

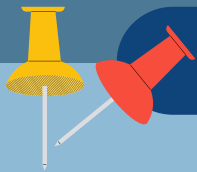

The GoIDEA Section 504 Management System allows school districts to easily track and maintain data for students using a 504 plan. The system is an add-on module to our Special Education Student Management System and includes accommodation plans, customizable forms, and reports all in one easy to use system.

ENGLISH LEARNER MANAGEMENT SYSTEM (EL)

Many districts have English Learners in their student population. As with our 504 and Advanced Learner systems, the EL system is an add-on module to GoIDEA and includes accommodation plans, customizable forms, and reports all in one easy to use system.

IEP PROGRESS MONITORING

According to IDEA, progress monitoring procedures must be established for each goal in a student's IEP. Progress monitoring is the method of formative assessment used to measure the student's progress toward meeting a goal. The GoIDEA Progress Monitoring module is a feature that assists the teacher or service provider in making ongoing instructional decisions about the strategies being used. It also provides evidence that enables the IEP team to determine whether the student has achieved his or her goals.

RESPONSE TO INTERVENTION SYSTEM (RTI)

RTI is a web-based system that helps school districts manage, track and report on student interventions – both behavioral and academic! This easy to use system lets users monitor and track student progress across tiers, grade, school and subject.

MEDICAID REIMBURSEMENT SYSTEM - GO SOLUTIONS

GoClaim™ can interface with any IEP product and either import services reported into IEP or allow direct provider service entry into the system. Services entered are turned into a claim and submitted to the state Medicaid vendor for district reimbursement for qualified services provided. System access is role-based, allowing districts to decide what access should be assigned to district personnel.

Digital Signatures

GoIDEA provides a Digital Signature solution to expedite parental consents. Included with the Digital Signatures module is the Guardian Signature Status report which allows you to track the status of forms sent to guardians for signatures.
